True or False?

-8.8

45. If x is negative, then x^2 is positive. True $(-)^2 = (-)(-) = (+)$

46. If the product abc is positive, then $a, b,$ and c are all positive.

False

Two of the #'s could be negative. Ex: $(-4)(-2)(3) = 24$

47. If the product of four numbers is 0, then at least one of the numbers is 0.

True

The only way to get a product of 0 is to multiply by at least one 0.

48. If $a < 0$ and $abc > 0$, which statement must be true?

$a < 0 \rightarrow$ negative $abc > 0 \rightarrow$ positive therefore $bc < 0$ (negative)
